Where's the market now?

Brands are consolidating every path from brand.com (store locator and shoppable PDPs) and brand media (shoppable media, like landing pages and direct-to-cart links) to retailer.com for a unified shopper journey, data backend, and strategic vision.

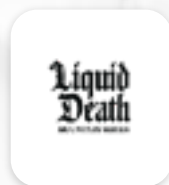

Making everything shoppable and unlocking TRUE retail ecommerce strategy to measurably improve ROAS.

is disrupting the market with
best-in-class tech

- Winning RFPs & side-by-sides
- Giving all CPG brands the power to win share like a “digital native”
- Providing better visibility into full-funnel shoppability

1

One-click shopping
with accurate
inventory at all digital
shelves

3

Build digital
audiences and run
optimized
campaigns

2

Mid-campaign sales
data insights to
improve ROAS

Ideally...
you'd run retail ecommerce like a
digitally native brand runs DTC

Now You Can. Pear's *Unique* Solution

Most Comprehensive Retail Shoppability

Pear is the only provider that can bring shoppability to 3K retailers & **165K locations**. Period.

Most Up-to-Date Inventory Data

Our platform scans inventory daily, ensuring the most up-to-date coverage. **Every 24 hours**, Pear pulls 500M inventory points—or 6,000/sec.

Actionable Insights Using Session Data

While not fully attributable, use Pear **non-batched sales and consumer journey data** to understand the levers that are driving actual sales at retail.

Audiences on Purchase

Pear integrates with ad platforms so brands can **build audiences of the shoppers who engage** with your media to find and buy online at retail.

WHY SHOPABILITY & DATA INTEGRITY MATTERS

Next-gen retail ecommerce

Enable Shoppability

Being shoppable means allowing your consumers to buy your products where they like to shop.

- Our daily inventory scans 165,000 stores nationwide to ensure no dead ends.
- Pear creates the shortest path to purchase to the most retail locations.

Pear has **60x the industry standard of retailers** with dynamic, product to store mapping.

Being Where Your Shoppers Want to Buy

In addition to Amazon, Walmart, Target, and Kroger, integrating with local co-ops, pharmacies, & regionals where shoppers are most loyal can contribute up to 40% of sales, that you are otherwise leaving on the table.

Inventory Data

- Daily inventory refreshes
- 3,000 retailers; 165,000 locations
- Only show in-stock UPCs at geo-relevant retailers

Sales Data

- Click-level (vs session-level) data
- Click-level sales data from ~50 retailers
- Pixel firing to unlock marketing playbook

How Inventory Relates to Data Integrity

Not all data integrity is the same.

Insights, evaluations and dashboard pulls are *only helpful if the product is actually shoppable* in the first place.

Out of stocks and dead ends plague the marketplace.

Pear's true uniqueness is the number of paths to purchase we can filter into our data set compared to competitors.

Build bigger audiences faster with the most comprehensive and accurate shoppability.

[View report >](#)

Real-Time Insights to Improve ROAS

Pear collects click-level data - down to the purchase level - giving brands full-funnel visibility into how campaigns are performing. We then fire pixel events back to your ad platforms, allowing you to build custom audiences and unlock marketing optimizations.

For all 3,000+ retailers in its network, Pear captures:

- 1 PAGE LOAD, or see a retailer
- 2 RETAILER VISITS, or click a retailer button

In addition, Pear uniquely receives click-level sales data (rather than batched) from [50+ retailers](#)

Click-level sales data allows Pear to fire pixel events to ad platforms (TTD, Meta, etc.) to build audiences of purchases and run purchase-optimized campaigns within those platforms. No PII collected.

- 3 PURCHASE, buy the product

[Full Retailer List - Including Lookback Windows >](#)

How Do Brands Use the Sales Data & Pixel Firing?

Audiences of Purchasers

Because Pear gets sales data at the click-level, Pear can uniquely build audiences of actual purchasers for retargeting and lookalikes

Optimizing ROAS

Use Pear's deterministic sales data to measure which audience, product, ad platform, etc. is driving more sales, and reallocate budget

Purchase-optimized Campaigns

Brands can use Pear's purchase signals to create campaigns that leverage the ad platforms' machine learning to better serve the ad and automatically drive more down-funnel results.

Limitations of Data

No shoppable media or where-to-buy vendor can provide fully attributable sales data.

We get data via a variety of means, from API to affiliate feed to csv files.

Our biggest limitations to the data we receive are attribution windows and last-click attribution, providing information only for clicked SKU.

Our data can be used as a way to measure effectiveness of your retail ecommerce marketing.

The next step for Pear is to proactively provide insights when we understand parameters.

PRODUCT SUITE

Next-gen retail ecommerce

Pear Commerce's Product Suite - A Full Consolidation Strategy

Product Suite

ONSITE / WHERE TO BUY - UPPER FUNNEL / AWARENESS

STORE LOCATORS

Connect shoppers to any in-stock retailer in their area with shoppable paths to purchase directly from your store locator.

SHOPPABLE PDPs

Embed "Buy Near You" functionality directly onto your product pages with one-click paths to purchase at 3,000+ retailers with current inventory.

SHOPPABLE RECIPES

Drive retail ecommerce purchases directly from your recipe pages with industry-leading shoppability.

OFFSITE / SHOPPABLE MEDIA - LOWER FUNNEL / SALES VELOCITY

PEAR CONNECT

Eliminate drop-off by dynamically driving shoppers to retailers' carts from your digital ads in a single click.

LANDING PAGES

Drive your media to shoppable Landing Pages displaying any combination of products and retailers.

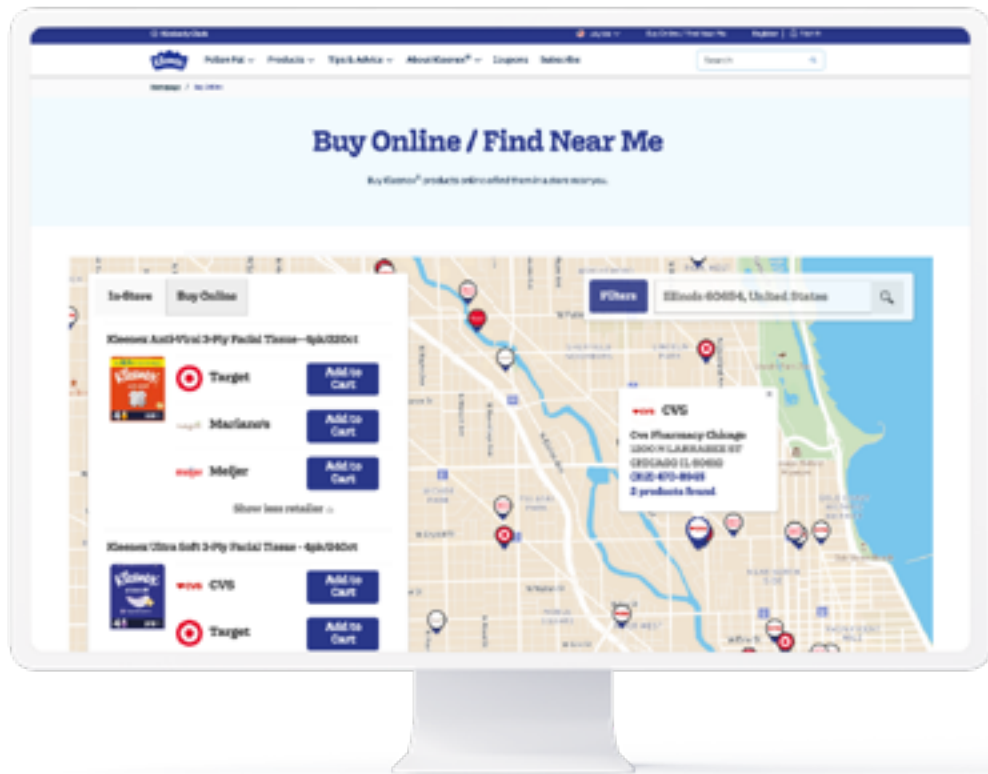

DIRECT-TO-CART

Create one-click experiences from your ads or owned content to a retailer's cart using Direct-to-Cart Links.

Actionable store locators with daily inventory updates

- Fully shoppable and commerce enabled (i.e., add to cart buttons on all retailers to encourage incremental commerce)
- Understand shopper behavior
- Build free highest-intent, unsegmented audiences
- Categorize, filter, and segment products for easy browsing
- Customize branding (fonts, colors etc) to seamlessly fit widgets into brand.com UX

[Live Demo: Kleenex >](#)

DAILY INVENTORY

MORE PATHS-TO-PURCHASE

PRODUCT-LEVEL DATA

AUDIENCE BUILDING

Make your website more actionable with single-click shoppability

- Every extra click in the shopper journey results in 95% audience drop-off. Reduce the path to purchase at retail down to one click and create a cohesive buying experience directly on your PDPs.
- Provide actionable locations for awareness driving media
- Build free highest-intent, unsegmented audiences
- Fair and Equitable: Pear only showcases retailers with in-stock paths to purchase; creating a dynamic experience based on the consumer location. Can be randomized to not show preference to single retailers.
- Customizable buttons for inventory based on varying product size, count etc.

DAILY INVENTORY

MORE PATHS-TO-PURCHASE

AUDIENCE BUILDING

Pear Exclusive Innovation

Reduce clicks,
increase sales.

Dynamic, one-click shopability
from digital ads to geo-relevant, in-
stock retailers

WHY IT MATTERS

Reduce Drop-off

With every click you lose ~95% of shoppers. We dynamically bring “where-to-buy” into the ad unit itself, displaying only the retailers with current inventory, and bypassing the need for a retailer selection interstitial.

- This allows for the most ad efficiency and maximization of your marketing budget.

Personalized Ad Serving

Automatic ad improvement

The ad platform will serve the product-retailer combo with the highest likelihood of getting selected.

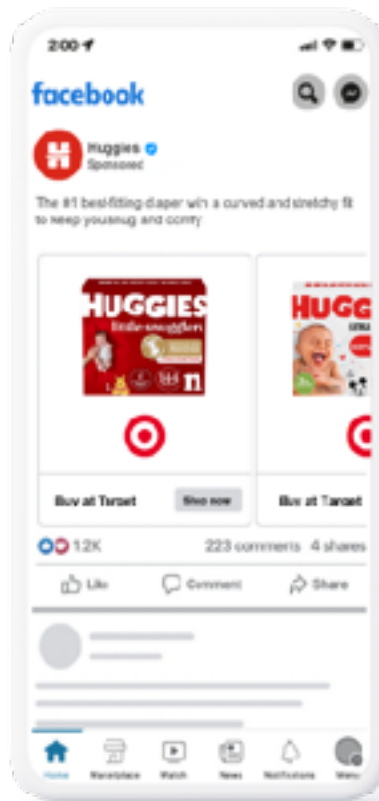

Choose your products & retailers

Brands can choose to show only certain retailers or products.

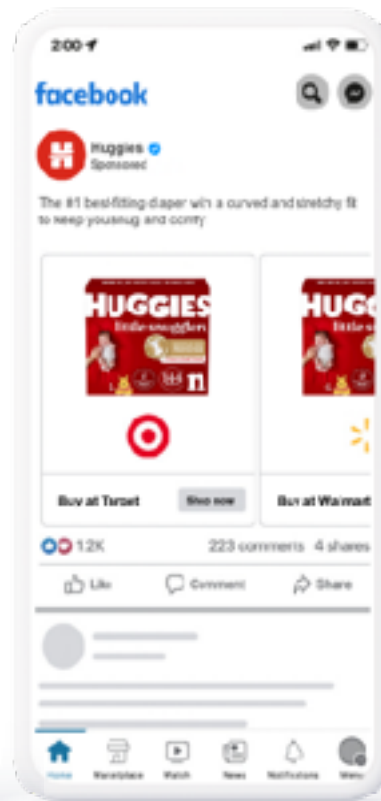

Fair & equitable

Pear Connect ensures fairness by giving equal opportunity to competitors across the market, by leaning into the algorithm to choose the right retailer/product combo for each user based on their preferences.

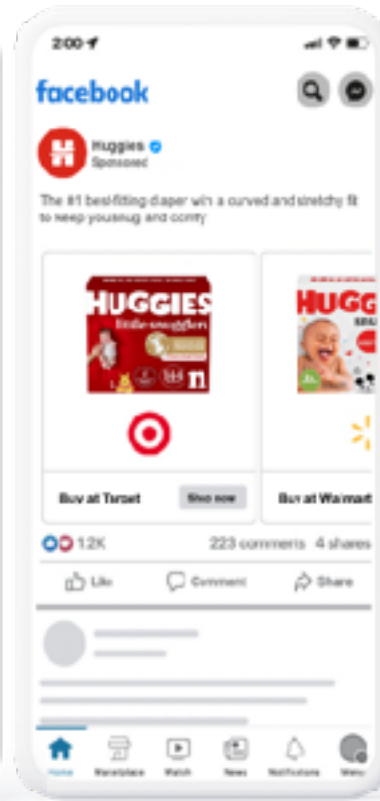

One time installation - Self-serve after

Any products
Single retailer

Single products
Any retailer

Any products
Any retailer

Actionable landing pages with daily inventory updates

- Dynamic interstitials bridging shoppable media to retail.com
- Customize product and retailer combinations to meet your brand's objectives and provide a fair and equitable approach to retailers
- Customizable buttons for inventory based on varying product size, count, etc.

[Live Demo: Kleenex](#)

 DAILY INVENTORY

 MORE PATHS-TO-PURCHASE

 PRODUCT-LEVEL DATA

 AUDIENCE BUILDING

One-click add-to-cart at retail

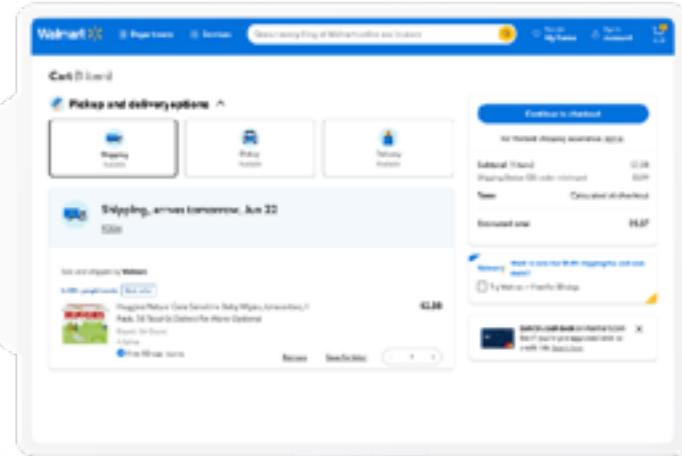

Drive sales velocity with frictionless paths to purchase at select retailers.

Fallback/Backup Products

If products are out-of-stock, Pear can rely on as many fallback products as needed. (e.g. Show 12-pack if 24-pack is sold out.)

Most Popular Use Case

Often aligned with shopper or retail specific initiatives and offsite media when you know which product(s) and the retailer you want to support: driving trial, velocity, mid-lower funnel engagement.

Pear's Roadmap to Global Expansion

CURRENT

- **US:** Full proprietary tech stack with daily inventory scanning, click-level consumer journey, and sales data
- **Canada:** Daily inventory scanning and click-level journey data.
- **Global:** All countries can have hard coded paths to purchase at major national retailers (ie. Tesco) and click-level journey data

2025

- First stop on the roadmap bring full daily inventory scanning to **UK**, **Australia** and **France** in addition existing click-level journey data

NEXT

- **Work with KCC to understand priority regions to expand** inventory scanning and focus engineering resources. We want to be your partner in global expansion!

FINAL GOAL

- Global expansion with full US capabilities across all major regions worldwide.

FULL-FUNNEL STRATEGY

USING PEAR PRODUCTS & DATA TO IMPROVE AWARENESS
& DRIVE MORE SALES AT RETAIL

Next-gen retail ecommerce

Mid-funnel: Consideration

Brands have ignored the mid-funnel

Due to lack of inventory and performance data, unreliable shoppable experiences, and expensive conversion rates to send to retailer PDPs, brands have specialized spend on awareness and purchase, ignoring the mid-funnel.

Nurture Engaged Consumers

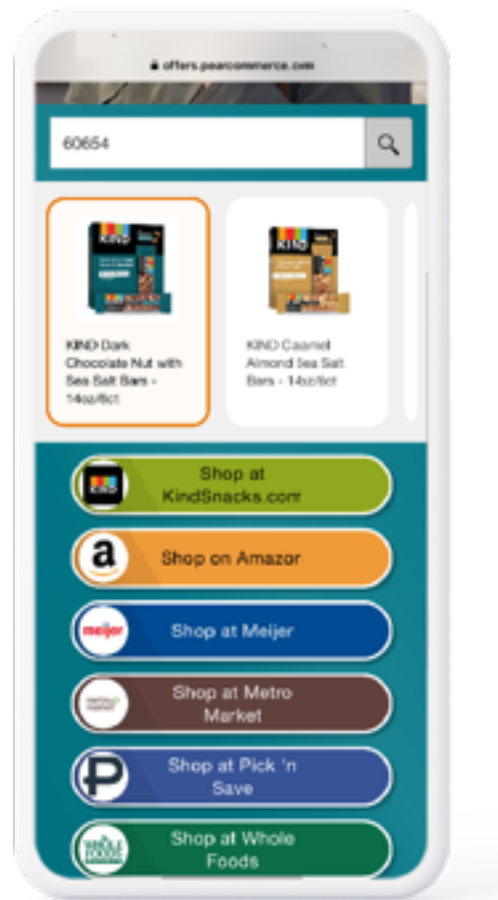

Keep consumers and potential repeat customers engaged with deliberate retargeting efforts, and build lookalike audiences to acquire more.

Encourage Trial

Shoppers trial at retail, so the mid-funnel is the ideal audience to target and retarget to build habitual purchasing.

Run Mid-Funnel Awareness Campaigns

Certain awareness ads (e.g. sweepstakes, incentives, or limited time releases) would be more effective if served to a brand's mid-funnel audience.

How Can Pear Help Improve Awareness Efforts?

Redefining awareness

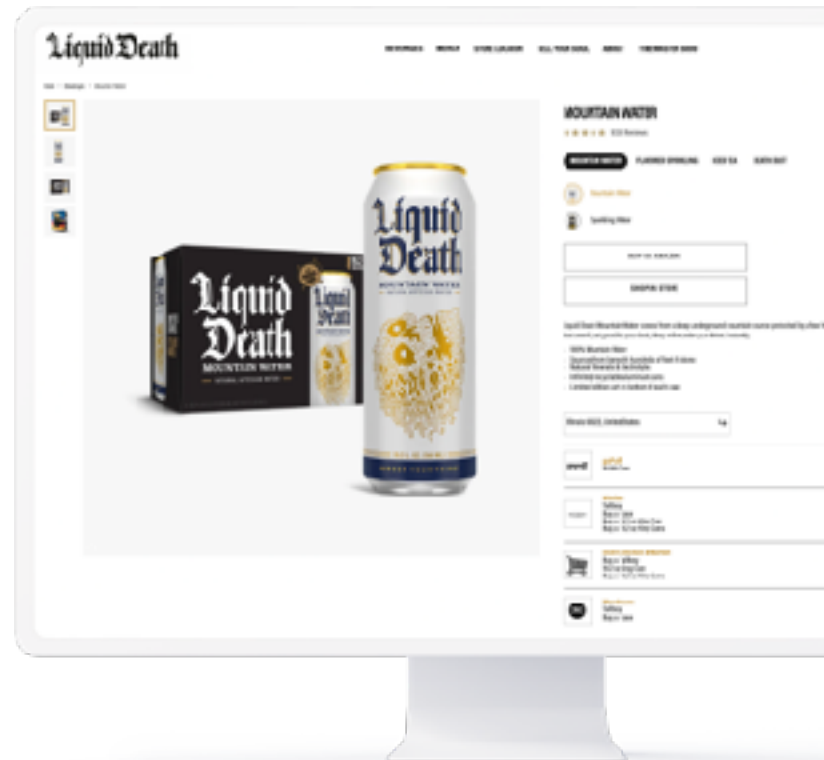

For many brands, awareness means less “*does this product exist?*” and more “*where is this product available for purchase today?*” Sending to a shoppable store locator, which produces the highest-intent unsegmented audience you’ll own, can be the perfect media destination.

Audiences of Brand Engagers

Awareness campaigns can create large digital audiences of the shoppers who engage with your brand, which can be perfect to retarget with promos, product launches, or other campaigns and to build lookalikes for customer acquisition.

Brand.com Pages Becoming Media Destinations

Rather than sending to a shoppable landing page, brands are using shoppable, owned properties - like their PDPs - for better website engagement without losing shoppability, data, or audiences.

How Can Pear Help Improve Purchase?

Customer Acquisition through Pear Audiences

Pear's audiences are some of the most potent given they are the shoppers who buy your brands specifically online at retail. These can be used to retarget for retailer-agnostic campaigns or to build lookalikes for customer acquisition.

Optimizing ROAS

Use Pear's deterministic sales data to measure which audience, product, ad platform, etc. is driving more sales, and reallocate budget.

Purchase-optimized Campaigns

Brands can use Pear's purchase signals to create campaigns that leverage the ad platforms' machine learning to better serve the ad and automatically drive more down-funnel results.

On-shelf Availability Data

Pear can produce reports of store-level availability for each UPC, which can be used to empower sales and merchandising teams.

IMPLEMENTATION MADE EASY

LET US BE YOUR HELPFUL GUIDES

Next-gen retail ecommerce

Our Approach

1

You matter to us.

2

We collaborate to make our customers' visions come to life.

3

We're tech forward, leaning into automation for easy integrations.

4

We're nimble. We build.

5

Doggone it, people like us.

Meet Your Team

Pear's Customer Success team comprises experienced customer success managers to be your main point of contact and retail ecommerce strategists, implementation specialists to create and QA delivered products, and a solutions engineer to handle technical issues. Strategy will support JBP success and other brand strategies.

Sales

Implementation Overview

- 1 Pear provides dedicated Customer Success Managers (CSMs) and a streamlined form to easily collect all necessary information.
 - 2 Pear will import your UPCs into our system. This can take ~3 weeks to complete, but requires no work from the brand.
 - 3 Once UPCs are imported, we'll immediately begin the process of creating your Pear-powered products.
 - 4 Configure your Pear products' look and feel based on your brand guidelines. (Our implementation team will help!)
- 

SLAs & Deliverables

ONSITE / WHERE TO BUY

Turnaround: 4-6 Weeks, scope dependent

STORE LOCATORS

Give Pear UPC list for indexing and we'll return a working unit <4 weeks later

We'll return a code snippet to copy/paste into desired page container

SHOPPABLE PDPs

Share URLs for any PDPs, Recipes, and Content

We'll return a code snippet to copy/paste into desired page container

OFFSITE / SHOPPABLE MEDIA

Turnaround: 1-4 Weeks

DIRECT-TO-CART

Submit an onboarding request through our portal with desired UPCs and retailer(s)

We'll return links in 5 days

LANDING PAGES

Submit an onboarding request through our portal with desired UPCs and retailer(s)

We'll return links in 5 days

FEAR CONNECT

Requires one time authentication with your ad manager of choice (~15min)

Once that is complete, its self serve within desired ad manager (Meta, etc.)

We'll return first catalog links in 10 days for Meta/Snap, 20 Days for TikTok

Service Model

Pear uses a variety of touch points and checkpoints to ensure all team members are trained, up to date, and that projects are on track.

Expect a dedicated team with sales, CS, ops, eng, and leadership, including an executive sponsor.

Sample timeline, project plan, and onboarding team information:

- Discovery & introduction
- Q&A and follow up conversation
- Approval - Agreement, redlines, execution
- Assets delivered to Pear
- 30 days to go live once assets received and contract signed
- Kickoff Call - Goals, requirements, etc.
- Pear assets delivered
- Review & technical validation (QA)
- Launch
- Post-launch Call - Data review & mapping
- Monthly check-ins with dedicated CSMs
- Quarterly JBPs with CSM and strategy team
- Rolling launch of new products, SKUs etc.

Scalable Pricing Model

Working with Pear Commerce, Kimberly Clark receives a flexible and scalable approach with best in class service!
All categories below can be utilized by brand(testing) and/or as full parent portfolio(enterprise) with scalable pricing

Products

Pear Products available to be included by Brand:

- Store Locators
- Shoppable PDPs
- Shoppable Media:
 - Pear Connect
 - Landing Pages
 - Direct to Cart Links

Daily inventory scanning at unlimited retailers within Pear's +3K network

Unlimited 24/7 Dashboard Access with Unlimited Seats

Unique 1P Audience collection through ad pixels

Optimizations based on conversions and consumer journey data

Service

A Dedicated Team including Customer Success managers, strategists and onboarding specialists

Onboarding and implementation assistance

Easy integrations with pre-built JavaScript widgets, automated SKU imports and retail scans, minimizing brand set up efforts

Monthly Check-ins for optimizations, recommendations and partnership discussions

Quarterly JBPs

Flexibility

12 Month Contracts implemented based on individual brand needs with discounts for enterprise

Additional discounting for multi-year contracts and preferred payment terms

Global expansion in partnership with KCC needs

Customizations and adaptability of UX

Enterprise Full Platform Discounts

Pear provides significant discounts for enterprise accounts with all pricing based on:

- # of Brand Portfolios(KCC est. 10)
- # of SKUs per Brand
- Pear Tools Activated per Brand

Bespoke Pricing Proposal for KCC provided upon final scope discussions and business needs.

Appendix

Next-gen retail ecommerce

Additional RFI Questions - Not Addressed Above

1. API-based solution to include support for an array of SKUs or product family name, returning all product attributes in one response
 - Pear Commerce uses retailer.coms for the source of truth for things like our inventory as well as all product attributes. However, we understand not all retailers and 3P content providers have the most up to date assets, so we can also ingest this information from the brands themselves, if desired.
1. API-based solution to include support for geolocation of consumer based on zip/postal code and/or latitude/longitude, returning retailers specific to that location.
 - Pear uses IP addresses to serve geo-relevant retailers to consumers based on their location and in-stock availability.
2. API-based solution to include developer portal/documentation and supporting sandbox along with PROD and NON-PROD environments.
 - Not Applicable for Pear's current tools.
1. Pre-built JavaScript widget for the local store finder experience to geolocate the user and display nearby stores. Widget to include mapping and geolocation capabilities built-in so KC does not need to manage those licenses.
 - Yes, Pear uses the Mapbox widget and will only require a one-time modification to your website to include a script tag.
1. Portal access to view/edit products mapping with their attributes. Utilization of product mapping sheet if portal is unavailable.
 - Will use product mapping sheet and can update on a rolling basis.
1. Easy integrations with existing product feeds to minimize setup effort
 - Pear uses retailer.com for product availability and requires no work on the KCC team and their agencies.
1. Design options/adaptability for UX
 - Pear tools are customizable for fonts, colors, filters, and sizes. We will work with KCC to build products bespoke.

Initial Goals

- Perdue wanted to enhance their omnichannel experience with a store locator that could support all 400 of their UPCs to upgrade their shoppability.

Approach

- Perdue partnered with Pear to implement a shoppable store locator with the power to scan their 400+ UPCs daily.
- The Pear team listened to their concerns with their previous where-to-buy provider and offered custom recommendations and resources to support a successful transition.

Results

Following a successful implementation - coupled with ongoing education and strategizing - Perdue is now expanding their Pear partnership to support additional brands and new products.

- ✓ Adding shoppability to another brand within their Pet division
- ✓ Adding Pear Connect, Shoppable PDPs, and Recipes to their suite of Pear products

"You are our preferred vendor for a WTB/Store Locator tool. With our OnePerdue mission, we are working towards all our brands using the same vendors. Within the next few years, as we get our arms around all our brands, we are going to be extending our relationship & partnership with you."

~ Tyler Edwards, Marketing Manager

Goals

- Make *Brand's owned properties (website, recipes, etc.) and brand media shoppable
- Create paths to purchase to all available retail partners with daily inventory scanning
- Increase retailer selection rates from shoppable experiences

Approach

- *Brand tested campaigns driving to Shoppable PDPs and Shoppable Links to measure overall shoppability at retail across six months of data

**Brand name redacted for confidentiality*

Results

1100+ Retailers displayed to shoppers from
*Brand's shoppable experiences

500+ Individual retailers selected from *Brand's
shoppable experiences

Outcome

- Pear was able to dynamically display paths to purchase to 11x the number of retailers compared to competitors.
- *Brand leaned heavier into their Shoppable PDP strategy and saw a 5x increase in clickthrough rates to retailers, relative to Shoppable Links over Q1.
- *Brand expanded its investment in Pear's shoppable tools, moving every brand in their portfolio to Shoppable PDPs to create more shoppable experiences.

Goals

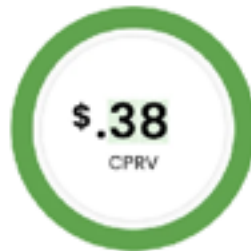

- *Brand wanted to leverage retail ecommerce to make their spend and **budgets more efficient**

Approach

- *Brand partnered with Pear and launched a Pear Connect test campaign for one of the brand's most popular products on Meta, with a goal of \$11 Cost-Per-Retailer Visit

**Brand name redacted for confidentiality*

Results

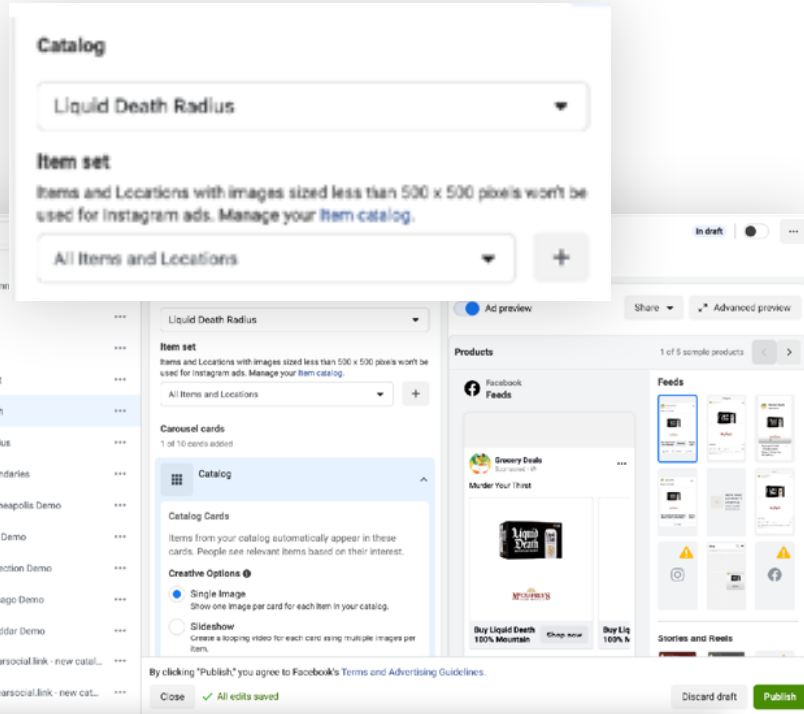

\$0.38 Cost-Per-Retailer-Visit
compared to \$11 goal

29x performance
using Pear Connect

- By bypassing the landing page with one-click, in-ad unit shoppability, Pear Connect brought the cost it takes to bridge to a retailer page down to \$0.38.
- Compared to *Brand's goal of \$11 Cost-Per-Retailer-Visit, Pear 29x'd performance.

Setup is Simple: Ads

Once Pear is set up with your media vendor (Meta, Snapchat, TikTok, Pinterest, Trade Desk, etc.), running new campaigns is as simple as setting them up in the ad platform itself. No more back and forths on landing pages (but we're always happy to help!)

Pear enabled ads allow you to pick your preferred retailers and products right within the ad setup on Meta, Snapchat, Pinterest, and TikTok.

Setup is Simple: In Unit Ads

```
<script type="text/javascript"  
src="//offers.pearcommerce.com/js/sdk.jk"></script>
```

Copying and pasting a single line of code means you're ready to go!

Technical Implementation: On Site Assets

The process for installing Pear's shoppable widgets is as easy as inserting our widget code into your HTML.

```
<script type='text/javascript'>
  !function(b){var
    a=document.createElement("script");a.async=!
    0.,a.src="https://offers.pearcommerce.com/js/
    sdk.js?
    config="+encodeURIComponent(JSON.stringify(b)),
    document.head.append(a)}(
    {
      //WIDGET CONFIGURATION
      vendorId: '000000000000',
      // ... additional configs provided by pear
    });
</script>
```
