

| Goal                                    | Detail                                                                                                                                         | Response                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|
| Drive conversion from brand touchpoints | Enable customers to move frictionlessly from media and brand.com to retailer carts.                                                            | Pear turns every touchpoint into a shoppable moment. From ad to brand site to cart, shoppers can purchase in one click with real-time inventory, ensuring seamless journeys, higher conversions, and measurable retail impact.                                           |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Own the Omnichannel Journey             | Deepen our ability to understand and influence the path to purchase across brand and retail channels                                           | Pear empowers brands to own the omnichannel journey with real-time insights from every touchpoint. By unifying brand and retail data, we help you influence shopper behavior and drive measurable retail growth.                                                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Unlock Full-funnel Media Attribution    | Link media campaigns to retailer sales with granularity, transparency and accuracy, with the intention of optimizing media campaigns for ROAS. | Pear Commerce links media directly to retailer sales with click-level, closed-loop attribution. Our platform provides transparent, granular data to optimize campaigns for ROAS with accuracy.                                                                           |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Scale Globally                          | Support multiple markets, languages, and retailer integrations while maintaining global consistency in reporting and governance.               | Pear scales seamlessly worldwide—supporting diverse markets, languages, and retailer systems. Our unified platform ensures consistent global reporting while empowering brands to activate locally with impact.                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Improve Retailer Relationships          | Offer visibility into performance by retailer to drive strategic partnerships and joint business planning.                                     | Pear unlocks retailer-specific insights that show exactly how campaigns drive sales. By sharing this visibility, brands deepen retailer partnerships and fuel collaborative growth. In fact, many brands use our data to help improve in-store shelf placement and more. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                         |                                                                                                                                                |                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

|-----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| <b>User Experience and User Interface</b>                                                           | Website Plugin/Embeddability: Seamless integration as a website plugin or embeddable widget on existing web pages without requiring significant code changes to your main site. | Pear makes shoppability simple - our plugin drops into your site with minimal effort, embedding "Where to Buy" and cart functionality without heavy development. It is only two lines of code. A script in the header of the website and then a Div Target.  |  |  |
|                                                                                                     | Mobile Responsiveness: Ensure the shoppable content and purchasing flow are fully optimized and responsive across all devices (desktop, tablet, mobile).                        | Yes, every shopper, every screen - Pear optimizes the path to purchase for desktop, tablet, and mobile, delivering a seamless experience everywhere.                                                                                                         |  |  |
|                                                                                                     | Customizable Design: Options to customize the look and feel of the plugin (colors, fonts, branding) to match your website's aesthetics.                                         | Yes, most of this can be done through a point and click interface. Everything that you've called out here can be done through that interface. For even more customization, we can also allow the use of a Customer Style Sheet.                              |  |  |
|                                                                                                     | Intuitive Navigation: Easy for users to discover products, view details, and proceed to purchase.                                                                               | Yes, we can customize as needed, but this is something that is up to the Wella team                                                                                                                                                                          |  |  |
|                                                                                                     | Accessibility: Adherence to WCAG standards for accessibility.                                                                                                                   | Yes, we can provide our VPAT. We adhere to to WCAG 2.2                                                                                                                                                                                                       |  |  |
| <b>Comprehensive API (Robust and well-documented APIs: RESTful preferred, JSON formatting) for:</b> | Programmatic content creation and management.                                                                                                                                   | Yes, Pear streamlines content at scale. Our platform creates and manages shoppable experiences programmatically so brands can launch, update, and optimize quickly.                                                                                          |  |  |
|                                                                                                     | Retrieving analytics data.                                                                                                                                                      | Yes, Pear provides easy retrieval of analytics data through dashboards, exports, and API integrations for transparent performance tracking.                                                                                                                  |  |  |
|                                                                                                     | Integrating with product information management (PIM) systems.                                                                                                                  | Yes, Pear can connect directly with your PIM, keeping product details current and consistent so shoppers always see the right information wherever they buy.                                                                                                 |  |  |
|                                                                                                     | API Security Authentication and Authorization: Secure API authentication methods (e.g., OAuth 2.0, API keys).                                                                   | Yes                                                                                                                                                                                                                                                          |  |  |
| <b>Shoppable Content Creation and Management</b>                                                    | Content Types: Support for various media types (images, videos, GIFs, live streams, interactive experiences).                                                                   | Yes, Pear supports a wide range of content formats including images, videos, GIFs, live streams, and interactive experiences.                                                                                                                                |  |  |
|                                                                                                     | Hotspot/Tagging Functionality: Ability to easily add clickable hotspots or product tags directly onto visual content (images, videos) that link to product pages.               | We can easily add clickable hotspots, but would need more clarification to commit fully. What are these images/videos that you are referencing?                                                                                                              |  |  |
|                                                                                                     | Product Information Display: Customizable overlays or pop-ups to display product name, price, description, and "Add to Cart" or "Buy Now" buttons.                              | Pear makes shopping intuitive with overlays and pop-ups that highlight product details and give shoppers instant options to add to cart or buy now.                                                                                                          |  |  |
|                                                                                                     | Dynamic Product Data: Real-time synchronization of product information (price, availability, promotions) from connected marketplaces/inventory systems.                         | Yes                                                                                                                                                                                                                                                          |  |  |
|                                                                                                     | Content Scheduling: Ability to schedule the publication and expiry of shoppable content.                                                                                        | We do not currently have the ability to schedule out content within our tool, but it is on the roadmap                                                                                                                                                       |  |  |
|                                                                                                     | Batch Upload/Editing: Efficient tools for uploading and editing multiple pieces of shoppable content simultaneously.                                                            | We do have tools for batch uploading that we use internally. Would this need to be used by your external teams directly?                                                                                                                                     |  |  |
|                                                                                                     | Global CDN: Use of a Content Delivery Network for fast content delivery to users worldwide.                                                                                     | Yes. Pear leverages a global Content Delivery Network to ensure fast, reliable delivery of content and application assets worldwide. This enables consistent performance for users regardless of geography.                                                  |  |  |
| <b>Existing Tech Stack Compatibility</b>                                                            | E-commerce Platform: Compatibility with your existing e-commerce platform (e.g., Shopify, Magento, Salesforce Commerce Cloud, custom-built).                                    | Pear works wherever you sell. From Shopify and Magento to Salesforce Commerce Cloud or custom platforms, our tools integrate seamlessly to power shoppability.                                                                                               |  |  |
| <b>Data Governance</b>                                                                              | Data Ownership: Clear policies on data ownership and usage.                                                                                                                     | The data Pear Commerce collects to drive its various software solutions is generally ephemeral. We can make that data available upon request either in bulk or via an API.                                                                                   |  |  |
|                                                                                                     | Data Retention: Defined data retention policies.                                                                                                                                | The ephemeral data we collect is retained for a period of between 6 months and 1 year.                                                                                                                                                                       |  |  |
|                                                                                                     | Data Privacy: How the vendor handles customer data collected through the plugin.                                                                                                | We do not collect any PII via our various software solutions.                                                                                                                                                                                                |  |  |
|                                                                                                     | Data Security: Measures to protect sensitive customer and product data (encryption, access controls).                                                                           | All of our data is encrypted however we do not collect or store use PII.                                                                                                                                                                                     |  |  |
|                                                                                                     | PCI DSS Compliance: If the platform handles payment information directly or indirectly.                                                                                         | N/A, we don't handle any payment info                                                                                                                                                                                                                        |  |  |
|                                                                                                     | GDPR/CCPA Compliance: Adherence to relevant data privacy regulations.                                                                                                           | We don't collect data that would be governed under GDPR/CCPA                                                                                                                                                                                                 |  |  |
|                                                                                                     | Regular Security Audits: Evidence of regular security audits and vulnerability assessments.                                                                                     | Yes, this is currently being done with our SOC II audit                                                                                                                                                                                                      |  |  |
|                                                                                                     | Single Sign-On (SSO): Support for SAML 2.0 or other SSO protocols for secure user access to back office.                                                                        | Pear supports secure Single Sign-On (SSO) using SAML 2.0 and other standard protocols for back-office access.                                                                                                                                                |  |  |
|                                                                                                     | High Availability: Guarantee of uptime and low latency even during peak traffic.(>98%)                                                                                          | Yes, Pear keeps performance steady even at scale. We deliver >98% uptime with low latency to ensure seamless shopping during peak demand. We have supported brands during Super Bowl launches without a hitch.                                               |  |  |
|                                                                                                     | Scalable Infrastructure: Ability to handle increasing volumes of content, user traffic, and marketplace integrations without performance degradation.                           | Yes, Pear's infrastructure scales to support growing content, user traffic, and marketplace integrations without performance degradation.                                                                                                                    |  |  |
| <b>Technical Support</b>                                                                            | SLA (Service Level Agreement): Clear SLAs for uptime, response times, and resolution times.                                                                                     | We commit to a 99.9% application uptime, 48 hours for response times, and incident resolution between 2hrs and 5 business days (depending on severity)                                                                                                       |  |  |
|                                                                                                     | Support Channels: Availability of support via various channels (phone, email, chat).                                                                                            | We support email support with the SLAs outlined earlier                                                                                                                                                                                                      |  |  |
|                                                                                                     | Documentation: Comprehensive technical documentation for integration and troubleshooting.                                                                                       | Yes, depending on what you are looking for specifically, we can provide that to you                                                                                                                                                                          |  |  |
| <b>Update and Maintenance</b>                                                                       | Release Schedule: Information on frequency and nature of software updates and new feature releases.                                                                             | Yes, we are always evolving. In fact, the bulk of our investment is into innovating our tech, something our competitors cannot claim. We deliver regular updates and new features to keep your shoppable experiences stable, fresh, and ahead of the market. |  |  |
|                                                                                                     | Bug Fixes: Process for identifying and rectifying software bugs.                                                                                                                | Yes, we will give you access to a ticketing portal where you can report bugs and track progress                                                                                                                                                              |  |  |
